A Message from the Chair

To those in the community of the Harvard University Standing Committee on Archaeology (SCA),

I am delighted to report on another year of activities of the archaeological community at Harvard. As you will see from the extensive list of archaeological talks and events held at Harvard this year, lots is going on. This list is compiled from our weekly announcements of archaeological events, which we distribute through an email mailing list. If you are not receiving these announcements and would like to, I urge you to write us at sca@fas.harvard.edu. While we attempt to make this as comprehensive as possible, and thereby minimize the amount of avoidable overlap between archaeology talks and activities, inevitably some things slip through the cracks. For example, some archaeological working groups on camps have a mix of public and more private events, and only the former are listed here. Nevertheless, this list will give you a sense of the variety of events we have had occur — a truly impressive and widely diverse array.

Among these various events, most of which were hosted by specific departments, centers, or seminars on campus, we also convened a Standing Committee on Archaeology event, Critical Perspectives on the Practice of Digital Archaeology, during the spring semester (in addition to the SCA talks in the fall semester that were reported in the last issue of In Situ). The spring event involved a day-long symposium on digital approaches to archaeological data, organized primarily by Eric Kansa, and a half-day practical training workshop focused on both data collection in archaeological research and the use of legacy data in digital environments. This event was well attended and involved a stimulating series of talks and conversations. A link to video records of the event proceedings are available on the website of the Standing Committee on Archaeology and can be accessed at (archaeology.harvard.edu/videos).

In this issue of In Situ we are pleased to have a series of reflections that illustrate the perspectives of various members of the Harvard community on their experiences at the long-running Harvard excavations at Sardis. These include comments from students, Harvard faculty, Sardis excavation staff, and the director of the project. Hopefully these essays will give
you a sense of the lively intellectual and educational environment of this mainstay of archaeology at Harvard. In addition, several graduating seniors from the College who are receiving Secondary Field in archaeology certifications from the SCA have reflected on their engagement with archaeology while at Harvard. The Secondary Field administered by the SCA provides a way to substantiate and certify engagement with archaeological coursework and training during their undergraduate education. We also administer a Secondary Field at the graduate level that certifies a similar engagement among PhD students in fields that are not inherently defined as archaeological. We currently have several students in the PhD secondary field in a number of departments across campus.

Many of us are already heading to the field for the summer. I am finalizing my comments for this edition of the newsletter from my field project in Gansu, China, where we are about to begin a month of excavations at sites dating to the second millennium BC. This year our participants include one current Harvard undergraduate, one former Harvard undergraduate, one current Harvard PhD student, one recently completed Harvard PhD, one Harvard PhD from several years ago, and two recent Harvard visiting scholars, (not to mention the Harvard faculty writing this note), representing a wide range of ways that archaeology is practiced at Harvard. We are already looking forward to next year, however, when we will have an exciting series of archaeology talks in the anthropology department, several archaeology symposia and workshops, and continued efforts to bring together the various constituents in our archaeological community.

-Rowan Flad, John E. Hudson Professor of Archaeology, Chair of Standing Committee on Archaeology.

The Standing Committee on Archaeology at Harvard University is a multidisciplinary group of scholars at Harvard who promote the teaching and research of archaeological work around the world.

The Sardis Expedition: An Archaeological Exploration

Nick Cahill, Field Director of the Sardis Project, University of Wisconsin-Madison

The size, longevity, complexity, and richness of the archaeological site of Sardis make designing a straightforward research agenda challenging. When Prof. G.M.A. Hanfmann of the Department of the History of Art and Architecture first considered excavating at Sardis in 1956, he had a simple objective: to obtain stratigraphic information about Lydian pottery for his publication of ceramics from excavations of 1910-1914. However, by the time he founded the Archaeological Exploration of Sardis in 1958 with Cornell University Prof. Henry Detweiler, he had broadened his agenda to include the excavation and restoration of a Roman bath, Lydian tumuli, prehistoric settlements, geomorphology, numismatics, and a host of other areas.

For almost 60 years Sardis has been a diverse archaeological project pursuing many different goals.
Like Prof. Hanfmann, each season we have to make hard decisions about where to focus our efforts. Almost anywhere we dig would produce interesting results. We decide how to compose the team to accommodate both our own objectives and the interests of scholars around the world who visit for their own research; how to keep up with publication of older discoveries while taking advantage of our unique opportunity to conduct fieldwork; how to train the next generation of archaeologists, conservators, architects, etc.; and how to take advantage of (or avoid!) the inevitable serendipitous discoveries, which can derail the plans of even the most single-minded scholar. And even so, we are always surprised by each year’s results.

Among the objectives we have tried to juggle in recent years are the excavation of a terrace in the city center, part of a sanctuary of the Roman imperial cult. At some point the sanctuary was dismantled and its space reused as houses, shops, and a late antique fortification that may have walled off part of the city (partly excavated by Eliza Gettel). Such transformations of urban space are among the most important aspects of late antiquity, and Sardis offers many opportunities to study them. My own interests lie in earlier periods when the Lydians, a native Anatolian people, made Sardis their capital and engaged in an imperial expansion over most of western Turkey. Our current excavations in the Lydian palace offers hope for major new understandings of the relations between Anatolia, Greece, and the Near East at this formative period of history. And conservation and publication remain among our primary foci.

Figure 2. Geophysicists Stefan Giese and Christian Hübner of GGH Solutions in Geoscience surveying the same tumulus in 2011 using ground-penetrating radar from within tunnels dug in the 1960s. The team used electrical resistivity, electrical resistivity tomography, magnetometry, and GPR. Although they identified an anomaly, further tunneling showed that these were not the chamber, and despite digging almost half a kilometer of tunnels within the mound, the burial chamber remains undiscovered.

Figure 3. The Whittlesey Bipod, invented to take aerial stereo photographs of excavations trenches, in use in 1964 at sector PN. The Bipod was far more controllable than balloon or kite photography, and could be rectified on film to produce stereometric photos and three-dimensional representations. Today we use drones and photogrammetric software for the same purposes (fig. 6).

Figure 4. Epigraphers Georg Petzl (University of Cologne, R) and Richard Posamentir (University of Tübingen, L) deciphering an inscription on an architrave block from the nearby temple. The inscription was in gilded bronze letters now missing, leaving only the sockets for the tenons. They read on the top line “SYNK[”, Greek for the Roman Senate, probably relating the decree of the Senate that allowed Sardis to build the temple to the imperial cult.
One of the challenges of a project with an excavation history as long as Sardis’s is dealing with our own archaeological legacy, in addition to the cultural heritage of the site. Nearly sixty years of work has produced mountains of data; in our FileMaker database we have 20,071 catalogued objects, 23,911 coins, and 15,356 object drawing records, not to mention the 273,173 photo records. Unlike born-digital projects, we must work within the constraints set up in a pre-digital era of paper, mylar, and film, while simultaneously integrating new data forms, like drone video, photogrammetry, RTI data, NAA analysis, etc.

Naturally, excavation methods and practice have changed over the years, and the language used in recording artifacts and contexts in 1958 is not identical to the language we use today. Data has to be normalized and curated in some respects so that it is findable to those not familiar with the inner workings of the project, and we are constantly engaged in the process of preserving the integrity of the original records, while adding a layer of standardized searchability and clarification for it to be functional both internally and when integrated with other datasets.

Beginning in earnest in 2014, we started work with web developers at the Boston-based firm Vermonster to create a website for specialists and the general public.
alike. We chose the exhibition catalog from The Lydians and Their World, a show held at the Yapı Kredi Vedat Nedim Tör Museum in Istanbul in 2010, to serve as the first core of information on Sardis. It presents an excellent overview of the archaeological site and ancient Lydia, had contributions from an international community of scholars, and, most practically, it was already translated into English and Turkish. The essays and catalog entries allow us to show off the breadth of our resources, especially our image collection.

To complement the searchable content, we have also posted OCR PDFs of our reports and monographs. We wrote a series of introductory essays on different areas of the site and the history of the expedition itself, and recently we added digital, searchable versions of our Preliminary Reports which are otherwise difficult to find. With new large-catalog publications coming along, we look forward to publishing full, illustrated, datasets online concurrently with the print publications. We want people to check out our data, to search it and mine it for new insights, and to integrate it into their own work. We look forward to collaborating with other ancient world linked data initiatives on the web using Sardis’s vast catalog of archaeological material.

Paul Kosmin, Associate Professor of the Classics, Harvard University

When Alexander the Great conquered Sardis in 334 BCE, the city was the satrapal center of Achaemenid Asia Minor and the old capital of the Lydian empire. Some two centuries later, when the city came under Roman control, Sardis had become a classical urban entity, adorned with the necessary fixtures of Greek civic life: a city sanctuary with monumental temple; a theater; a gymnasium; a mint that produced regular city issues; sizeable, decorated private houses.

The Hellenistic Sardis Project was formed in 2014 to investigate this transformation. Two on-site workshops, in summer 2014 and 2015, culminated in a conference at the Weatherhead Center for International Affairs at Harvard on February 23-24, 2017. This conference, “City and Empire in Seleucid Asia Minor: Sardis from the King’s Peace to the Peace of Apamea,” brought together a number of leading scholars from a range of different disciplines, archaeological, numismatic, and historical. Andrea Berlin, Nick Cahill, Phil Stinson, and Fikret Yegül discussed changes to the city’s urban landscape, such as the city’s re-urbanization and monumentalization. Ruth Bielfeldt, Elspeth Dusinberre, Sabine Ladstätter, Chris Roosevelt, and Susan Rotroff explored how Sardis fitted into or contrasted with its immediate regional landscape and the wider Hellenistic world. Frances Gallart Marqués looked to transformations in the local cult of Cybele and Jane DeRose Evans to the city mint. Boris Chrubasik and Paul Kosmin took up the historical questions of city-empire interactions, with respect to the physical environs as well as broader institutional and ideological frames.

The conference was an enormous success, bringing before a large audience cutting-edge research and permitting a focused collaboration. It became clear that the dominating questions of Hellenistic historical scholarship are precisely those to which Sardis can make an enormous contribution: imperial dynamics, governmental structures, and political subjectivity; Hellenistic urbanism, especially the transformation of old Near Eastern centers into poleis; the adoption of new, globalized forms and institutions; the heightened role of cultural memory; and the extent to which all of these were made manifest in the built and natural environments.
Eliza Gettel, PhD Candidate, Classics Department

In early June 2014, with the generous support of the Harvard Art Museums and a Segal Travel Fellowship from the Classics Department, I found myself at Sardis in the middle of an olive tree grove with eleven Turkish workmen and a Turkish-English dictionary. By the end of my first day, I knew three very important words in Turkish: those for snake, scorpion, and cookie. Over the next month, I improved both my Turkish and miming skills while excavating a mysterious, gleaming marble, late Roman building near Sardis’ theater. By the time I completed my second trip to work at Sardis in 2015, I had truly become part of the many communities that make the site such a special place to work—eating dinner with my workman’s family, celebrating Fourth of July with the international dig team, and meeting visiting specialists from across the world.

I had dug at other sites before excavating at Sardis, but Sardis stands out in my memory for how it integrates all members of the dig team into study of the site. As an excavator at Sardis, you are not simply the labor but really the eyes of the project. While the specialists know the materials and objects, you become the specialist of the context. It is a humbling and inspirational experience to work side-by-side with scholars whose names you recognize from field-defining publications and to have them asking you questions about your discoveries.

I was particularly lucky to dig in a trench where we found several long, almost complete inscriptions in ancient Greek on those large, gleaming marble blocks. I got to work with these inscriptions and witness how a scramble of letters on a massive stone peaking out of the dirt becomes the published version of an inscription that we have in Widener. Now, back at Harvard, as I myself work to become a specialist in Greek epigraphy, or the study of such inscriptions on stone, I have a much deeper understanding of the process lying behind the production of our scholarly tools and thus their advantages and limitations. I also have a more comprehensive understanding that these inscriptions are not just texts, but archaeological objects—a fact too often overlooked in our studies of them. As I drew up my dissertation prospectus last fall, therefore, I designed a project that pays particular attention to the contexts in which the inscriptions I am studying were found. Although my PhD diploma might ultimately say ancient history, my two summers at Sardis have helped me be bolder about commenting on this material world.
2016-2017 Standing Committee

Gary Urton (Anthropology)

Archaeology Secondary Graduating Seniors

For me, archaeology has been a great way to supplement my knowledge of evolutionary biology (my concentration) and given me new perspectives on how humans have interacted with the environment. My classes on Amazonian archaeology especially have helped me solidify my beliefs about indigenous integration into environmental conservation. I have been lucky enough to have the chance to integrate my interests with some paleoenvironment field work, which really showed me how integration of biology and archaeology is important.

-Lorena Benitez (Concentrating in Integrative Biology)

I first became interested in archaeology when I participated in the Scandinavia summer school program where we completed an excavation on the island of Samso. Following this program, I have taken part in the Harvard Yard excavation and have been introduced to a wide variety of subjects and regions in my archaeology classes. I have enjoyed exposure to a range of archaeological practices and hope to continue to follow archaeology developments after graduation.

-Sarah Graham (Concentrating in Statistics)

The archaeology courses I've taken for my secondary have proven to be some of the most engaging and instructive courses of my Harvard career. From immersing myself in Ancient Egypt to excavating Harvard Yard, I've had numerous opportunities to conduct research, learn proper archaeological techniques, and present my interpretations to the public.

-Rachel Harner (Concentrating in English)
Affiliates of the Standing Committee on Archaeology include faculty and staff across the entire university. Our members and affiliates work with and in a range of museums and department on Harvard’s campuses.

### Affiliates of the Standing Committee

#### Associated Faculty
- Ruth Bielfeldt (History of Art and Architecture)
- David Carrasco (Anthropology/Divinity School)
- William L. Fash (Anthropology)
- Ioli Kalavrezou (HAA)
- Matthew Liebmann (Anthropology)
- Richard H. Meadow (Peabody Museum)
- David Reich (Harvard Medical School)
- Christian Tryon (Anthropology)
- Eugene Wang (HAA)

#### Active Emeritus Faculty
- Ofer Bar-Yosef (Anthropology)
- C.C. Lamberg-Karlovsky (Anthropology)
- Peter Machinist (NELC)
- Irene J. Winter (HAA)

#### Associates, Visiting Faculty, Visiting Fellows
- Adam Aja (Harvard Semitic Museum)
- Briget Alex (Human Evolutionary Biology)
- Karim Alizadeh (Anthropology)
- Abidemi Babatunde Babalola (W.E.B. Du Bois Research Institute)
- Gojko Barjamovic (NELC)
- Nick Blegen (Anthropology)
- Mark E. Byington (Korea Institute)
- Patricia Capone (Peabody Museum)
- David Carballo (DRCLAS)
- Jennifer Carballo (Peabody Museum)
- Nicholas Carter (DRCLAS)
- Nat Erb-Satullo (Peabody Museum)
- Barbara Fash (Peabody Museum)
- Yue Feng (Anthropology – Copan Project)
- Eurydice Georganteli (HAA/Medieval Studies)
- LeeAnn Barnes Gordon (Peabody Museum)
- Eduardo Góes Neves (DRCLAS)
- Joseph A. Greene (Harvard Semitic Museum)
- Theresa Huntsman (Harvard Art Museums)
- Laura Lacombe (Peabody Museum)

#### Seniors with a Secondary in Archaeology
- Lorena Benitez
- Abbey Frazer
- Sarah Graham
- Rachel Harner
- Lizzie Pate
Critical Perspectives on the Practice of Digital Archaeology

The creation, management, sharing, and preservation of digital data and media have gained great prominence in archaeological research, grant making, policy making, and software and systems development. Digital data has much promise. It can help us engage with wider communities, explore new research questions, and create and preserve a vastly enriched body of archaeological documentation. Digital data also has a certain glamor, gained in large part through its associations with the burgeoning tech industry. However, does our celebration of speed, efficiency, precision and innovation sometimes make technology a superficial distraction rather than a substantive means toward learning? How do we encourage more meaningful intellectual engagement with new media as they transform archaeology? This conference represents an opportunity to take stock and more thoughtfully consider how our embracement of digital technologies is transforming archaeological practice. Presenters: Anne Austin (Stanford University), Eric Kansa (Open Context), Rachel Opitz (University of South Florida), Jolene Smith (Virginia Department of Historic Resources), Theresa Huntsman (Harvard Art Museums), Jody Michael Gordon (Wentworth Institute of Technology), Mercè Crosas (Harvard University), Ece Turnator (Massachusetts Institute of Technology), Ixchel Faniel (OCLC Research), Shawn Graham (Carleton University), and Ben Marwick (University of Washington). Discussants/Moderators: Rowan Flad, Peter Bol, Peter Manuelian, Suzanne Blier, Jason Ur, Barbara Fash, and Gabriel Pizzorno.
